

ABSTRACT OF THE DISCLOSURE

An exemplary object of the present invention is to provide an encryption data recording method, encryption data recording system, and encryption data reproducing system which do not need a specific control to handle key data and are excellent in a security protection property, and furthermore in which a person with a due access right to a recording medium can easily utilize data. The encryption data recording method is characterized in that the method is provided with a data writing step which writes encryption data in at least one recording medium using the encryption data recording system with a plurality of recording media; a key data dividing step which divides the key data of the encryption data into a plurality of key data elements; and a key data element storing step which separately stores each key data element in a plurality of the recording media.
